

Automatic filter

AF 113 G

with internal pressure cleaning and integrated cyclone effect
Connection size: DN 50/G2, cast stainless steel

1. Short description

Filtration Group automatic backflush filters are suitable for applications where low-viscosity liquids have to be filtered.

These compact, inline filter systems are designed for automatic cleaning. The system is cleaned by rotating the element and back-flushing with internal pressure media.

Advantages:

- Extended filter service life due to the use of a cleanable element
- Cleaning without interrupting filtration
- Precise separation quality in accordance with the surface filter principle
- Top-quality, asymmetric filter medium made of multiple-sintered stainless steel fleece on a rugged core element
- Efficient filter cleaning assures maximum process stability
- Solid construction and high-quality materials for a long service life
- Minimal liquid loss during cleaning
- Filter cleaned one segment at a time with a high backflush pulse
- Actual filter rating and nominal separation are indicated
- Integrated preseparator tanks to tangential inflow and preseparator tube
- Material variants open up a wide range of applications
- Modular Filtration Group Vario system for optimum filter selection
- Gas-tight shaft seals available optional
- Application in Ex zone 1 and 2 optional
- Certification for Pressure Equipment Directive (PED) according to category III PED EN optional
- Easy maintenance
- Worldwide distribution

2. Operating principle

The Filtration Group AF 113 G backflush filter belongs to the Vario series. The compact Filtration Group automatic filter system is used for fine and micro-filtration of a variety of low-viscosity liquids.

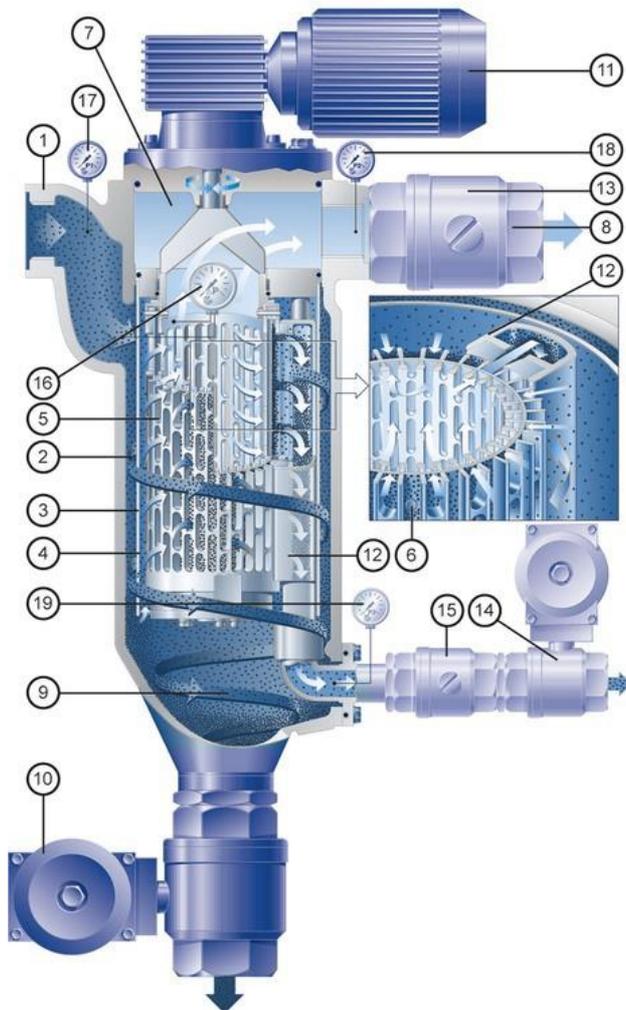

This inline pressure filter consumes no filter material, which means there is also no need for subsequent disposal. The filter is cleaned without interrupting operation. The concentrated solids are drained off simply by opening the system for a short time.

The medium to be cleaned is guided into the filter housing under pressure and flows inward through the Filtration Group segmented element. Particles settle on the surface of the filter medium. The filtered fluid exits the filter housing at the top opposite the inlet connection.

The integrated preseparator relieves the load on the segmented element, particularly from coarse and heavy particles. This is achieved by a tangential flow around the preseparator tube and the deflection edges.

The filter is cleaned when a preset differential pressure limit, a set interval or a defined filtered fluid quantity is reached. The segmented element is turned as the cleaning valve is opened. The segments are then guided one at a time past the flushing channel on the outer circumference, causing them to open and close alternately. The internal pressure is built up at a throttling point downstream of the filter, so that when one segment opens, an outward surge cleans the separated particles from the filter material. As a result of this pulse cleaning principle, the particles are catapulted out, collected in the flushing channel and discharged with a small amount of internal medium. One turn is sufficient to clean all segments. The residue that has settled in the collection cone can be emptied via the drain valve either when the machine is at a standstill or during filtration.

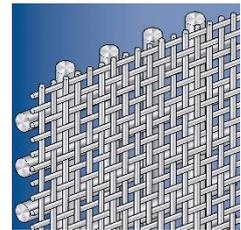

All filters of the Filtration Group Vario series are protected by various patents.

Used Filtration Group filter elements in the AF 113 G backflush filter:

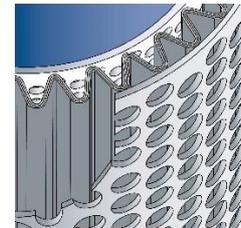

Filtration Group topmesh elements (standard):

- Good cleanability due to asymmetric design
- Large effective filter surface
- Defined particle retention
- Several material combinations possible

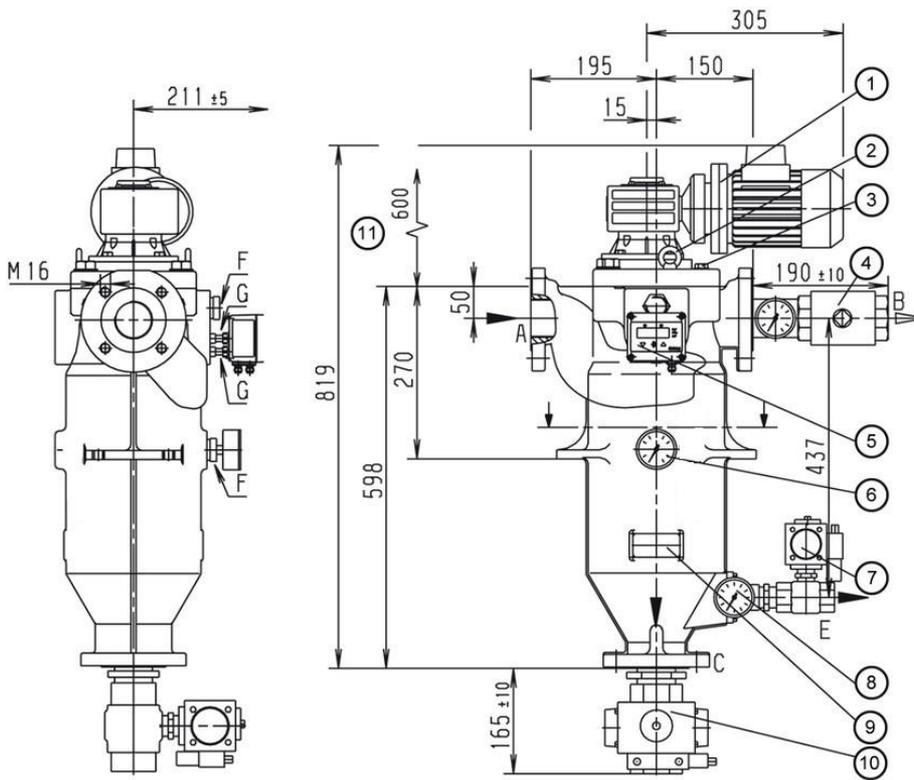

Filtration Group Wave element:

- Higher contamination levels because of pleated filter area
- Complete stainless steel
- Higher flow rate compared to standard elements
- Specially for filter fineness <math>< 60 \mu\text{m}</math>
- Filter media (wire mesh) made of 1.4401

- 1 Inlet connection
- 2 Outer inlet plenum
- 3 Preseparator tube
- 4 Inner inlet plenum
- 5 Filtration Group segmented element
- 6 Filtration Group filter materials
- 7 Plenum for filtered fluid
- 8 Drain connection for filtered fluid
- 9 Residue collection cone
- 10 Drain valve
- 11 Drive motor
- 12 Flushing channel
- 13 P2 control throttle
- 14 Cleaning valve
- 15 P3 control throttle (not always required)
- 16 Differential pressure contact gauge
- 17 P1 gauge
- 18 P2 gauge
- 19 P3 gauge (not always required)

3. Technical data

- 1 Cleaning drive: Worm gear motor can be mounted of each 90° position
- 2 Lifting eyebolts
- 3 Vent screw G $\frac{1}{4}$
- 4 P2 control throttle with P2 gauge
- 5 Optional: Differential pressure indicator/switch
- 6 P1 gauge
- 7 Optional: Automatic back-flush valve
- 8 Optional: P3 control throttle with P3 gauge
- 9 Name-plate
- 10 Optional: Automatic drain valve
- 11 Clearance required = 600 mm

Filter data

Max. operating pressure: 16 bar
 Max. operating temperature: 100 °C
 Materials:

- Housing and cover: Cast steel 1.4581
- Optional: Certificate acc. to EN 10204-3.1
- Internals: Cast steel 1.4581, stainless steel 1.4571
- Bearing bushes: PTFE based
- Seals: FPM (Viton)
- Segmented element: 1.4571 or 1.4571/Al (Δp max. 10 bar)
- Wave element: 1.4401

Cover lock: 4 x M20 hexagon screws

Connections and nominal diameters:

A-inlet, B-outlet,
 C-drain: threaded hole G2 in flange DN 50
 E-backflush: G1
 F-gauge: G1
 G-indicator: G1/8
 All threaded holes acc. to DIN 3852 form Z

Drive shaft seal: Lip seal with O-ring

Motor data

Worm gear motor
 Multi-range winding

V	Hz	kW	rpm	A
Δ 230 \pm 10%	50	0.18	9.3	1.2
Δ 400 \pm 10%	50	0.18	9.3	0.7
Δ 266 \pm 10%	60	0.22	11.2	1.1
Δ 460 \pm 10%	60	0.22	11.2	0.7

Protection class: IP 55; insulation class F; output torque: 97 Nm

Optional:

- Ex protection acc. to ATEX 2014/34/EU
- Electrical components in Ex II 2G T3
- Mechanical design in Ex II 2G c T3
- Worm gear motor Ex
- Ex II 2G T3, output torque 97 Nm

Weight: 85 kg

Volume: 12 l

 recommended design

Possible cleaning and discharge modes

Fully automatic operation:

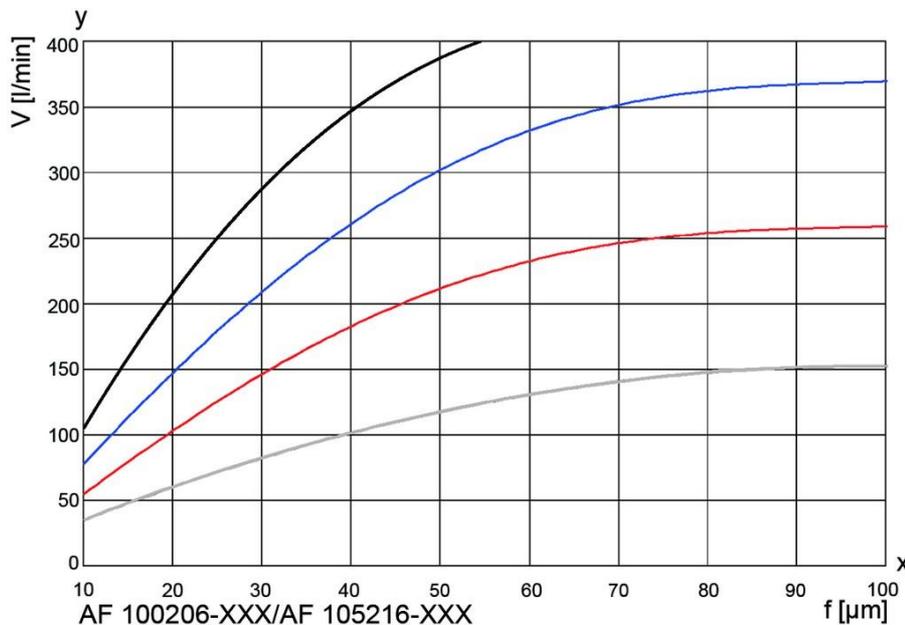

Filtration usually takes place under pressure. The filter is cleaned after a programmed time or a preset number of cycles or according to the differential pressure. We recommend cleaning the system at a differential pressure of approx. 0.5 - 0.7 bar. The cleaning motor is operated for around 7 seconds (about one turn of the element). The cleaning valve remains open for this period. An internal pressure of 2-3 bar is adequate to clean the filter efficiently.

The drain valve is opened in order to empty the filter. Depending on the residue concentration, this can either take place directly after cleaning or be time or cycle controlled. The opening time of the drain valve is 2-3 seconds.

Refer to the Instruction Manual for further information.

Filtration Group's team of specialists will be pleased to assist in any way. Tests can be carried out in the absence of reliable evaluation criteria.

5. Performance curves

The curves indicate the volume flow through the complete filter system (filter housing including element) and are referred to a differential pressure of 0.3 bar. Specific process information is essential to guarantee reliable operation of an automatic filter.

Viscosity

-  1 mm²/s AF105 DN65/G2 ½
-  1 mm²/s AF100 DN50/G2
-  33 mm²/s "
-  100 mm²/s "

y = Volume flow V [l/min]

x = Filter rating f [µm]

mm²/s = cst

6. Type number key

Type number key with selection example for AF 11363-1322-41220/G3

Size

AF 1136 1 x 110x265 No. of steps x diameter x length [mm]

Cleaning drive

- 3 Gear motor 230/400 V, 50 Hz or 266/460 V, 60 Hz
- 4 Gear motor 230/400 V, 50 Hz Ex II 2G T3

Inlet and outlet connections

- 3 threaded hole G2 in flange DN 50, mountings flange connection
- 13 threaded hole G2 in flange DN 50, mountings thread connection

Permissible operating pressure in bar (housing/cover)

- 2 PN 16

Material Seal FPM bearing PTFE

- 2 Stainless steel 1.4581/1.4571

Differential pressure indicator and gauge

- 1 PiS 3076, switching level at 1.2 bar static 63 bar
- 2 PiS 3076, switching level at 0.7 bar static 63 bar
- 4 PiS 3170, digital Δp gauge, 2 switching levels settable from 0 to 16 bar
- 5 PiS 3175, digital Δp gauge, 2 pressure transmitters settable from 0 to 16 bar

Valves and control throttles

- 1 P2 control throttle with P2 gauge
- 6 Like 1 but with P3 control throttle and P3 gauge

Drain valve

- 2 Ball valve, electropneumatic 24 V DC
- 3 Ball valve, electropneumatic 230 V AC
- 4 Ball valve, electric 24 V DC
- 5 Ball valve, electric 230 V AC

Cleaning valve

- 2 Ball valve, electropneumatic 24 V DC
- 3 Ball valve, electropneumatic 230 V AC
- 4 Ball valve, electric 24 V DC
- 5 Ball valve, electric 230 V AC
