

Automatic metal-edge filter AF 73 S/AF 93 S

with radial scraper cleaning
housing in welded design, optionally with cyclone effect
Connection size DN 50, DN 65, DN 80, DN 100, others upon request

2.Features

For the filtration and homogenization of low and high-viscosity fluids and pastes, Filtration Group automatic metal-edge filters offer an extensive range of applications.

The compact inline filter systems can be equipped with automatic cleaning. The system is cleaned by rotating the cartridge against a spring actuated scraper. The AF93 S version is with integrated preseparator.

Advantages:

- Low life cycle costs because of no filter material consumption
- Cleaning can be performed without an interruption in filtration
- Precision separation using the surface filter principle
- Sturdy filter cartridge made of triangular stainless steel wire on a robust inner core
- Efficient filter cleaning for process stability
- Solid construction and high-quality materials for a long service life
- Modular FGC Vario system for optimal filter selection
- Material variants for a wide range of possible applications
- Service-friendly
- Worldwide distribution

Optional:

- Design acc. PED 2014 / 68 EU AD 2000; ASME VIII div. U-Stamp; EN 13445; GOST
- Designed on customers demand e.g. heating jacket; special materials; housing adaption.

2. Functional principle

The FGC metal-edge filter system is used for filtering and homogenizing an extensive range of liquids and pastes. The compact, inline filter system does not consume any filter material and therefore no disposal is required afterwards.

With the modular FGC Vario system on the FGC metal-edge filters it is possible to configure up to three filter cartridges above one another when high throughput rates are needed.

The filter can be cleaned either automatically or semi-automatically without interrupting operation. The concentrated solids are easily drained by opening the system for a short time.

The medium being cleaned is guided into the filter housing under pressure or in suction mode. It flows inward through the FGC filter cartridges. The solids are separated on the surface of the triangular wires of the filter cartridge.

The filtered fluid exits the filter housing at the top opposite the inlet connection. In the AF 93 S version, the integrated preseparator relieves the filter cartridge of coarse and heavy particles by means of a tangential flow around the tube.

Cleaning of the filter is performed either when a preset differential pressure limit is reached or after a specified cycle time elapses. Here the FGC filter cartridges are rotated against spring actuated scrapers. The special gap geometry of the filter cartridge ensures efficient cleaning.

The particles or agglomerates are skimmed from the surface and settle in the collection cone. The patented bearing in the filter cartridges (AKF system) prevents high axial forces and simplifies the cleaning procedure.

The residue that settles in the collection cone can be emptied through the drain valve either when the machine is stopped or during filtration.

On the FGC metal-edge filter AF 73 S, coiled cartridges, welded cartridges, and perforated foils can be used.

FGC coiled cartridge (standard):

- Optimal cleaning with sharp-edged triangular wire
- Large effective filter surface
- Precise, small gap widths
- High differential pressure stability and torsional strength
- Different material combinations possible

FGC welded cartridge:

- High wear resistance to abrasive media
- Sturdy trapezoidal profile for high-viscosity media
- Continuous welded design
- Stainless steel construction

FGC perforated foil:

- Specified sharp-edged hole diameter
- Asymmetric hole pattern
- Continuous welded design
- Manufactured in stainless steel or nickel
- Suitable for filtering fibrous waste material

- 1 Inlet connection
- 2 Inlet plenum
- 3 FGC filter cartridge
- 4 Triangular wire winding
- 5 Triangular wire
- 6 Plenum for filtered fluid
- 7 Outlet connection
- 8 Particle collection cone
- 9 Scraper
- 10 Cleaning drive with gear motor or hand ratchet
- 11 Drain valve (automatic or manual)
- 12 Differential pressure indicator/switch
- 13 Feet optional

3. Technical data

Filter data

Max. operating pressure: - 16 bar, optional 25 bar / 40 bar

Max. operating temperature: - 100 °C, optional 200 °C

Design according: PED 2014 / 68 / EU

Materials:

- Housing and cover: Cast-Steel, 1.4571
- Internals: Cast steel and stainless steel, Al
- Bearing bushes: PTFE based
- Seals: FKM (Viton)
- Coiled cartridge: 1.4571 or Al, 1.4571 (Δp max. 30 bar)
- Welded cartridge: 1.4571 (Δp max. 10 bar)
- Element perforated foil: 1.4571 or Al, 1.4571 or Al, Ni (Δp max: 10 bar)

Connections and nominal diameters:

- A-inlet DN50, DN65, DN80, DN100
- B-outlet: DN50, DN65, DN80, DN100
- C-drain: DN50
- G-indicator: DN25
- All threaded holes acc. to DIN 3852 form X
- flanges acc. to EN 1092-1/11B1/PN 16 (Standard, depending on operating pressure and temp.)

Drive shaft seal: Gland packing rings made of PTFE fibre with disc spring pretension

type	W (mm)	X (mm)	Z (mm)	volume (l)	weight (kg)	cleaning drive

recommended design

Cleaning and emptying

Fully automatic operation:

Filtration usually occurs under pressure. The filter is cleaned after a programmed time or a preset number of cycles or according to the differential pressure. We recommend cleaning the system at approximately 4 times the initial differential pressure. The cleaning motor runs for about 10 seconds (about three turns of the filter cartridge). This is sufficient for a thorough cleaning. In certain rare cases it may be necessary to run the motor continuously. The drive shaft is always turned clockwise. The filter is emptied by opening the drain valve. This can either take place synchronously with cleaning or be time or cycle controlled, depending on the residue concentration. The opening time of the drain valve can be set between 2 and 6 seconds. The filter can be emptied in suction mode using a buffer or by interrupting the filtration process.

Semi-automatic and manual operation are also possible.

See the Instruction Manual for further information.

5. Performance curves

The curves represent the volumetric flow through the entire filter system (filter housing including for example one cartridge) and refer to a differential pressure of 0.3 bar. Specific information about process data is essential for reliable operation of an automatic filter.

Important note on performance curve!
It's an example of element AF 6016.
The number of dements per filter results from type number key in point 6.

Viscosity in mm²/s

- 1 mm²/s
- 33 mm²/s
- 100 mm²/s
- 500 mm²/s

y = volumetric flow V [l/min]
x = gap width f [µm]

6. Type number key

Type number key with selection example for AF 7373-521-50200 S1

Size / number of filter cartridge columns / function

AF 73	1 filter cartridge column Ø 110 mm / metal-edge filter with radial cleaning
AF 93	1 filter cartridge column Ø 110 mm / metal-edge filter with radial cleaning and preseparator through the cyclone effect

Number of filter cartridges

6	1 filter cartridge per column
7	2 filter cartridges per column
8	3 filter cartridges per column

Cleaning drive

3	Gear motor 230/400 V, 50 Hz or 266/460 V, 60 Hz
4	Gear motor 230/400 V, 50 Hz or 266/460 V, 60 Hz Ex II 2G T3

Inlet and outlet connections

3	DN 50 EN 1092-1 / 11 B1 / PN 16	5	DN 80 EN 1092-1 / 11 B1 / PN 16
4	DN 65 EN 1092-1 / 11 B1 / PN 16	6	DN 100 EN 1092-1 / 11 B1 / PN 16

Permissible operating pressure in bar (housing/cover)

1	PN10
2	PN 16
3	PN 25
4	PN 40

Material Seal FKM, bearing PTFE

1	Standard: Housing in carbon steel, internals in carbon steel, EN-GJS-400-15, aluminium
2	Standard: Housing in stainless steel 1.4571, internals in stainless steel
3	Standard: Housing in carbon steel, internals in stainless steel

Differential pressure indicator and gauge

5	PiS 3175 digital Δp gauge, 2 setting points 0 – 16 bar adjustable and analogous 4 – 20 mA/0 – 10 V
9	PiS 3180 Ex II 2G Exd IIC T5, 4 – 20 mA signal, static max. 40 bar, stainless steel

Valves and control throttles

0	Without/special version
----------	-------------------------

Drain valve

1	Ball valve, manual
2	Ball valve, electro-pneumatic 24 V
3	Ball valve, electro-pneumatic 230 V
4	Ball valve, electric 24 V
5	Ball valve, electric 230 V

Cleaning valve

0	Without
